React

Angular

Vue.js

Next.js

Node.js

GraphQL

MongoDB

Git

LANGUAGES

Spanish — Native

English — 70% (currently improving)

EXPERIENCE

INTERSHIP WEB DEVELOPER

Golabs   Oct 2021 - Dec 2021

- I fixed bugs in a projects manager office app, that control the resources and the different processes of the company's projects.
- I fixed bugs and designed in an internal web application of the company, created with Angular 8 and Firebase. The web application was about proposing ideas to improve the workplace. I used SCSS to make the styles responsive. I fixed bugs when creating a new idea and added new features, the ideas could be accepted, processed, or rejected.
- I worked in a team of six people (the project manager, four designers, and me) in a web app with Vue js, S3 and the integration of facial recognition technology face-api.js. The project was for the movement "Movember". It consisted in a filter where you select a mustache and then, this puts it on your face, then you take a picture, and this picture was saved in Amazon S3, and you can share the link in your social media. I had to investigate about face-api.js in their documentation and how I could integrate it with the project. The team met once a week and I showed them the progress for the web application.

EDUCATION

Colegio Técnico Regional Profesional de San Carlos
Network Computing

Technician Degree   Jan 2019 - Nov 2021

Universidad Estatal a Distancia
Computer Science

Diploma Higher Education   Feb 2022 - Current

FREE TIME
